The will to undertake, the Corporate Commitment

The terminal is the central element around which pre and post-shipment transportation modes are connecting: sea, river, rail, road, and pipeline... Far from being static, terminals are a dynamic element of the supply chain.

Rubis Terminal storage units differ in their history, their size, their location and their specialization. While some are a logistic base for industrial platforms, others serve as regional gateway for suppliers. Located in major logistic hubs, they participate in the balance of international trade. Some storage facilities have just been built; others have undergone profound changes to adapt to current standards.

All have in common what our partners expect from us:
> A constant concern for the safety of our staff, our subcontractors and our neighbourhood,
> Respect of the environment and the protection of land, water and air,
> Quality and volume retention of the products entrusted to us,
> Efficient and reliable procedures.

All also have in common what makes Rubis’ specificity, the professionalism of the men and women who design and operate these tools. Their personal skills, commitment and initiatives pave the way to innovative and effective solutions. Each site is run by an independent team, flexible and responsive. Alert to market changes and attentive to each customer, we always adapt to their requirements.

We focus systematically on the efficiency of our means of entry and exit: jetties, road and railway junctions. As our growth testifies; we contribute to the development of our industry and support our partners where their development leads them.

François Terrassin
CEO
Rubis Terminal is a subsidiary of the RUBIS group, a leading European company, specialized in distributing petroleum products (fuel, LPG...), and storing liquid products: oil, chemicals, agro products and fertilizers.

Rubis Terminal is the first independent operator in France and the fifth in Europe.

Thanks to its strategic locations and its continuous development, Rubis Terminal has become a key link in the energy chain and a major asset in the logistical chain for our industrial customers who wish to develop their strategy and business model.

- **1992** Acquisition of the Compagnie Parisienne des Asphaltes (CPA) and its terminals in Rouen and Dunkirk for a total capacity of one million cubic metres,
- **1995** Acquisition of the terminal in Brest,
- **1996** Acquisition of Lyon Saint-Priest and our first oil terminal in Strasbourg,
- **2001** Acquisition of the Propetrol company and its terminals located in Strasbourg (oil and chemical products), Salaise-sur-Sanne, Villeneuve-la-Garenne and Village-Neuf,
- **2007** Rubis Terminal turns to international development with the construction of a terminal in Rotterdam,
- **2008** Start up of Rotterdam terminal operations and launch of the construction of a new terminal in Antwerp,
- **2010** Start up of Antwerp terminal operations and acquisition of a shareholding majority in Dépôts Pétroliers de la Corse (DPIC Bastia/Ajaccio),
- **2012** Acquisition of a 50% share in the Ceyhan terminal (Turkey), investments to reach one million cubic metres of storage capacity and construction of a 2.3 km jetty with six vessel positions,
- **2013** Acquisition of a 500,000 cubic metres storage capacity on the former Reichstett refinery site.

The Rubis terminal group management policy is based on Health, Safety, Security and respect of the Environment. This system assesses and anticipates industrial risks in order to respond to issues of concern such as environment and safety.

Rubis Terminal meets ISO 9001 and CDI-T requirements for its storage activities in France and abroad as well as 14001 for its chemical storage in France. Furthermore, we subscribe to the Responsible Care® program for the French terminals.

The Group policy is to provide our staff, customers, suppliers, authorities and neighbours with a guarantee of:

- Operational safety,
- Quality retention of products,
- Land, water and air protection,
- Industrial risk management.

To meet its HSSE commitments, Rubis Terminal:

- Complies with all current regulation,
- Ensures customer satisfaction,
- Evaluates, anticipates and engages in a process of continuous improvement,
- Conducts quality, safety and environmental audits,
- Trains its teams through specialized agencies.

**PRESENTATION:**
The Dunkirk terminal plays a key role in petroleum and agro product flows in the north of France. The terminal, as a flexible multi-product hub is a strategic platform for imports and distribution. The terminal will be connected to the NATO pipeline in January 2014.

**SERVICES:**
- Blending of ethanol and biodiesel,
- Blending of biofuels,
- Additive dedicated process,
- Colouring,
- Dilution,
- Temperature control / reheating of products,
- Pipeline reception and transfers,
- Nitrogen blanketing.

**STORAGE CAPACITY**
- 475,000 m³
- 125 tanks (steel/stainless steel)

**TANK SIZES**
- 260 to 23,000 m³
- 10 to 12.4 m

Rouen

PRESENTATION:
Ideally located by the Seine River and on a section of the TRAPIL pipeline (LHP), the Rouen terminal is a major point of import for sea-going vessels. This makes it a gateway and distribution hub which is extremely close to major areas of consumption, such as the Paris area.

SERVICES:
> Blending of ethanol and biodiesel,
> Additive dedicated process,
> Colouring,
> Dilution,
> Product circulation in tank,
> Temperature control / reheating of products,
> Pipeline reception and transfers,
> Nitrogen blanketing.

FRANCE
Strasbourg – Reichstett

**PRESENTATION:**
In February 2013, Rubis Terminal has taken over the storage and distribution activity of the ex-refinery of Reichstett. Situated in the north of Strasbourg, this terminal is ideally located on the main motorways and linked to our oil terminal in Strasbourg Port by pipeline. The current capacity of 360,000 m³ should increase to 500,000 m³ in 2017.

**SERVICES (FROM 2014):**
- Blending of ethanol and biodiesel,
- Additive dedicated process,
- Colouring,
- Pipeline transfers.

PRESENTATION:
ITC Rubis is a joint-venture between Rubis Terminal and Mitsui & Co. The terminal is located on the left bank of the Escaut River. A new lock, to be built by 2015, will be a major asset for the development of this terminal. With a current capacity of 95 600 m³, it will extend to 162 100 m³ in 2016. In the long term, the depot capacity will be around 500 000 m³, with a possible extension for gas storage and the construction of extra jetties.

SERVICES:
> Temperature control / heating of products / cooling,
> Product circulation in tanks,
> Different vapour recovery and processing systems,
> Nitrogen blanketing,
> Degassing ships.

CONTACT
Tel.: +32 32 10 09 00

www.itcrubis.com
Rubis Terminal Rotterdam Botlek is specialised in storing and transhipping chemicals and petroleum products. Built in 2008, the depot is equipped with the latest technologies. Its four jetties are a strong competitive asset for the terminal. With a current capacity of 160,400 m³ (28 tanks), progressive extensions have been planned to reach 342,000 m³ by 2015-2016.

SERVICES:
> Blending and mixing of mineral products,
> Temperature control / heating of products / cooling,
> Product circulation in tanks,
> Heating for land transportation means,
> Different vapour recovery and processing systems,
> Demineralized water on site,
> Ship / barge / train transhipments,
> Nitrogen blanketing,
> Degassing of ships.

PRESENTATION:
Petroleum products, chemical and petrochemical products (high benzene content authorized).
**Presentation:**
Delta Rubis is a joint-venture between Rubis Terminal and Delta Petrol. The terminal is located in the South East of Turkey, near the city of Ceyhan, close to Iraq, the second largest oil producer in the world. The storage tanks for bunker fuels and import products are on track since March 2013. Beginning 2015, the current capacity of 650,000 m³ will be extended to 987,000 m³ and the 2.3 km jetty, under construction, will be ready to receive Suezmax vessels. The Group is also considering the construction of storage tanks for chemicals.

**Services:**
- Blending in tanks,
- Additive dedicated process,
- Blending of ethanol and biodiesel,
- Colouring,
- Product circulation in tanks,
- Temperature control / heating of products.
